About me

I always wanted to develop myself in the IT world, and when I found the opportunity I jumped right into it. I started with enrolling in JaP and constantly enhancing my skills, managing not only to succeed in JaP but also to reach a great base of programming knowledge; which nowadays gives me a solid trust to start my professional career as a developer.

Experience

Project Innovation (2020-2021)

I managed to develop a large scale real state project which aimed to make Piriápolis to experience an astronomic change. The project focused on build two green friendly towers with different amenities and diverse technological advances. I learned how to properly documentate a project, have meetings with diverse possible clients or government entities which their goals where aligned with the project (such as the local municipality), and mainly lead people under the Agile methodology.
